Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1-35 (canceled)

- 36. (original) An array substrate for use in a transflective liquid crystal display device, comprising:
 - a substrate;
 - at least one gate line and at least one gate electrode formed on the transparent substrate;
- a gate-insulating layer formed over the at least one gate line and the at least one gate electrode;
- a silicon layer formed on the gate-insulating layer, the silicon layer being positioned above the at least one gate electrode;
- a source electrode and a drain electrode formed on the silicon layer and spaced apart from each other with the silicon layer overlapped therebetween, wherein the at least one gate electrode, the source electrode, the drain electrode, and the silicon layer define a thin film transistor (TFT);
 - at least one data line;
 - a first passivation layer covering the at least one data line;
 - a transparent electrode formed on the first passivation layer; and
 - a reflective electrode formed on the transparent electrode.

Docket No.: 8733.526.10-US

- 37. (currently amended) The array substrate of claim [[35]]36, wherein the reflective electrode has a double-layered structure.
- 38. (currently amended) The arrays substrate of claim [[35]]36, further comprising a second passivation layer between the transparent electrode and the reflective electrode.
- 39. (new) The array substrate of claim 37, wherein a first reflective electrode layer is a corrosion-resistant metal layer.
- 40. (new) The array substrate of claim 39, wherein the corrosion-resistant metal layer is one of chromium and molybdenum.
- 41. (new) The array substrate of claim 37, wherein a second reflective electrode layer is an aluminum-based layer.
- 42. (new) The array substrate of claim 39, wherein the aluminum-based layer is one of aluminum and aluminum neodymium.
- 43. (new) The array substrate of claim 36, wherein the gate line and gate electrode have a double layered structure.
- 44. (new) The array substrate of claim 43, wherein a first gate line and gate electrode layer is one of aluminum and aluminum neodymium.

Docket No.: 8733.526.10-US

- 45. (new) The array substrate of claim 43, wherein a second gate line and gate electrode layer is titanium.
- 46. (new) The array substrate of claim 36, wherein the first passivation layer is one of benzocyclobutene, acryl-based resin, and silicon oxide.
- 47. (new) The array substrate of claim 45, wherein the first passivation layer is silicon oxide and the second passivation layer is silicon nitride.
- 48. (new) The array substrate of claim 45, wherein the transparent electrode is one of indium tin oxide and indium zinc oxide.
